

PEPTI- elastin

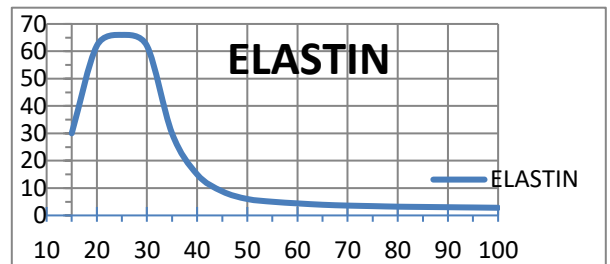

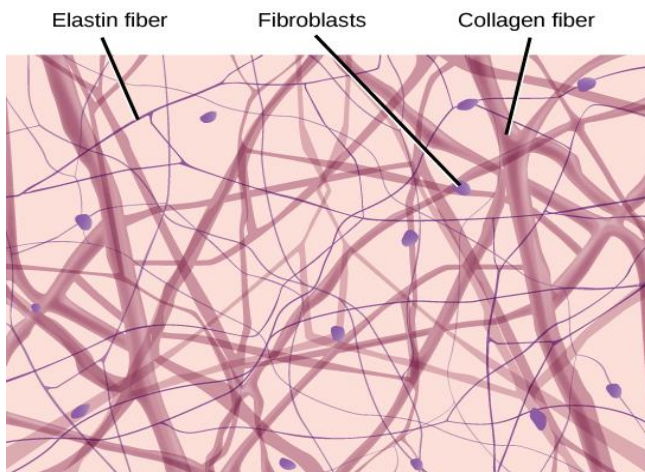

Elastin is the counterpart to collagen. It is made up of fibers that provide the stretch and snap (elasticity) in our skin. Elastin forms a meshwork of fibers that acts like spandex for the skin.

Hydrated elastin functions in combination with desmosomes (fibrous bonds holding skin cells together) to tighten the skin. As hyaluronic acid (providing the hydration) holds 1000 times its weight in water, it moisturizes and protects the skin from environmental assaults and UV damage.

At about 28 years of age, elastin production is at a maximum. At 32, elastin production regeneration has passed the peak regeneration, and by 42 the skin begins exhibiting the signs of aging. Sagging, fine lines, crow's feet, creases, and associated wrinkles start to appear.

By 65, gravity appears as a dominating force. The forehead droops over the eyes, jowls appear, expression lines become prominent, and other parts of the body decline as well.

The solution seems simple, regenerate the elastin fibers within the skin. PEPTI-elastin restores your skin to a younger, more vibrant, glowing appearance. The appearance of wrinkles diminish, skin looks and feels tighter, revealing younger-looking, healthier skin.

Graph of elastin production depicting the problem of aging. Note the breakpoint of the curve is at about 42 and the aging process continues without the asset of high levels of elastin production.

At 65 years of age, elastin production is at a minimal level of skin restoration. Peptides induce elastin production within the skin for anti-aging and self-restoration.

PEPTI-elastin supports natural skin processes to restore and improve the appearance of:

- Elastin production to youthful levels
- Skin Tone
- Facial and Body Contour
- Hydration Levels
- Skin's Surface Texture and Smoothness
- Skin's Healing Abilities
- Diminishes the Appearance of Stretch Marks

Application: Apply day or night with a thick coat over the entire face and neck. For impressive results, apply PEPTI-elastin during each salon treatment and at home.

PEPTI-elastin Ingredients: Aqua (Water), Propanediol, Arginine, Glycine, Histidine, Lysine, Tyrosine, Glycerin, Niacinamide (B3), Retinyl Palmitate, Pantothenic Acid (B5), Xanthan Gum, PEG-40 Stearate, Diazolidinyl Urea, Iodopropynyl Butylcarbamate
