## Protocol For Micro-Needling or Micro- Channeling Using Viktoria De'Ann Peptides

Determine Peptides to be used based on skin condition and desired result.

Double Cleanse to ensure a “clean palette”, first with the Purifying Cleanser, followed by the Balancing Cleanser.

Apply a layer of the 5% Lactic with Collagen to dry skin and allow it to set for 10-20 minutes

(light therapy can also be done at this time). Do not rinse off as the 5% Lactic is self-neutralizing.

Begin layering peptides from thinnest to thickest (see weight chart). Allow each layer to thoroughly penetrate before moving to the next layer. Use your final layer of peptides as your “glide”.

Begin your Micro-Needling Procedure (or micro channeling). Generally, start in the chin area, then above the lip, cheeks, nose, forehead and finally the neck and décolleté until all the face and neck has been treated.

Apply a thin layer of Mild Rejuvenator (I use the mild formula since the client's skin could be a bit more sensitive).

Complete the service by applying the Collagen Gel, and the Day Moisturizer if needed.

**Make sure that you send the client home with a “Post Kit” to use for the next 3-5 days in order to enhance her results.**

**\* If using a numbing agent prior to micro needling make sure to follow the cleansing procedure carefully to avoid needling the numbing agent into the skin.**
