Protocol For Micro-Current Using Viktoria DeAnn Peptides

Determine Peptides to be used based on skin condition and desired result.

Double Cleanse to ensure a “clean palette”, first with the Purifying Cleanser, followed by the Balancing Cleanser.

Apply a layer of the 5% Lactic with Collagen to dry skin and allow it to set for 10-20 minutes (light therapy can also be done at this time). Do not rinse off as the 5% Lactic is self-neutralizing.

Begin layering peptides from thinnest to thickest (see weight chart). Allow each layer to thoroughly penetrate before moving to the next layer.

Apply the Nano Mask and leave on (pour the remaining liquid from the packet into a bowl to be used later). Begin your Micro-Current Procedure directly over the mask. If the mask begins to dry you may re-wet by brushing on the remaining liquid from the mask packet.

After completing the treatment remove and discard the mask.

Apply a thin layer of Mild Rejuvenator (I use the mild formula since the client's skin could be a bit more sensitive).

Complete the service by applying the Collagen Gel, and the Day Moisturizer if needed.

Make sure that you send the client home with a “Post Kit” to use for the next 3-5 days in order to enhance her results.
