

HYALURONIC PEPTIDE SERUM

MEDIUM MOLECULAR WEIGHT (200-400 KDA)

DESCRIPTION

Professional Use Only

Viktoria DeAnn Hyaluronic Peptide Serum (Medium Molecular Weight) is formulated with hyaluronic acid ranging from (200 to 400 kDa), closely resembling the molecular structure of natural hyaluronic acid found in amniotic fluid recognized for its restorative and protective properties. This molecular size functions as a bioactive communicator, helping coordinate cellular activity during the skin's natural renewal process. Because of its remodeling and barrier-supporting abilities, this form of hyaluronic acid is especially beneficial for skin that has been overexposed to the sun, over-treated, or experiencing visible textural changes associated with sensitivity or stress.

TREATMENT STEP

 Restore

PEPTIDE TYPE

 Signaling

SKIN TYPE

All Skin Types, especially compromised, sun-damaged skin

TEXTURE

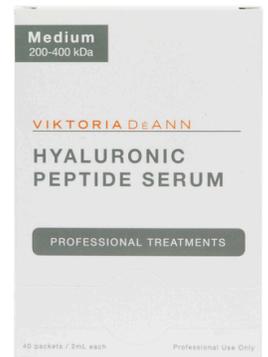

Concentrated Serum

LAYER LEVEL

Layer 3 (200-400 kDa)

KEY ACTIVES

Hydrolyzed Sodium Hyaluronate (200-400 kDa), Pro Hyaluronan Peptide, Palmitoyl sh-Hexapeptide-13, Acetyl Glucosamine, Sodium Polyglutamate

FUNCTION

- Creates structural pathways that guide fibroblast activity
- Helps restore essential hydration
- Enhances skin's reparative process
- Improves barrier strength and function
- Assists in increasing general skin health

TARGETED SKIN CONCERNS:

- Damaged or environmentally stressed skin
- Scarring and poor texture
- Poor or compromised barrier function
- General skin health
- Poor reparative processes and slow healing
- Dull, and tired looking skin
- Dry and dehydrated skin

THE SCIENCE:

Medium molecular weight hyaluronic acid (200–400 kDa) functions as a bioactive component within the extracellular matrix (ECM), facilitating structural organization and cellular communication. Within this molecular range, Hyaluronic Acid exhibits an optimal balance between permeability and film formation, allowing it to modulate fibroblast motility, mechanotransduction, and matrix remodeling while maintaining hydration equilibrium. By binding water molecules and interacting with cell surface receptors, it promotes keratinocyte proliferation, fibroblast viability, and ECM synthesis, essential for tissue repair and renewal. This activity enhances skin elasticity, texture uniformity, and barrier resilience, particularly in conditions where the skin has been overtreated, compromised, or environmentally stressed.

PROFESSIONAL USAGE:

Use one packet per client during most product penetration treatments. Use this product following the Cleanse Phase product or layered with other Restore Phase peptides. This product may be applied with a mask brush, or by hand using the proper peptide laying method. Pair with a variety of advanced modalities to help minimize downtime, accelerate skin repair, and promote a smoother, more comfortable healing process. Follow with the Protect Phase.

KEY ACTIVES:

Sodium Hyaluronate (200-400 kDa) - penetrates into the upper layers of the epidermis, delivering deep, sustained hydration while forming a lightweight moisture veil on the surface. Its molecular structure allows it to bind and retain water within the extracellular matrix, improving elasticity and biomechanical flexibility. By supporting optimal moisture balance both superficially and within the stratum corneum, it enhances cell cohesion, smoothness, and barrier integrity, promoting a plump, refreshed appearance without heaviness or residue.

Pro Hyaluronan Peptide - a specialized peptide that helps support the skin's natural ability to maintain hydration and improve moisture balance. It works in harmony with hyaluronic acid to enhance the skin's plump, smooth appearance and promote a healthy, refreshed look. This ingredient also helps reinforce the skin's protective barrier, making it feel more resilient, nourished, and comfortable.

Palmitoyl sh-Hexapeptide-13 - a bioactive peptide that supports the skin's natural renewal process and helps improve the appearance of texture and tone. It works by encouraging smoother, more refined looking skin while promoting a healthy and balanced complexion. This ingredient also helps enhance the skin's overall vitality, leaving it looking refreshed, supple, and nurtured.

Acetyl Glucosamine - a skin-identical amino sugar and a natural precursor to hyaluronic acid, known for supporting the skin's own moisture production and enhancing surface renewal. By supporting hyaluronic acid synthesis, it improves hydration, elasticity, and overall suppleness. This multitasking ingredient also helps refine texture, even skin tone, and reduce the appearance of hyperpigmentation.

Sodium Polyglutamate - a powerful humectant derived from fermented amino acids that holds several times more moisture than hyaluronic acid. It forms a lightweight, breathable film on the skin's surface to lock in hydration, improve smoothness, and enhance the skin's natural radiance and suppleness.

INGREDIENTS:

Aqua (Water), Propanediol, Glycerin, Glutamine, Prolyl Hydroxyproline, Glutamic Acid, Acetyl Glucosamine, Palmitoyl sh-Hexapeptide-13 Serine SP Amide, Sodium Hyaluronate (200-400 kDa), Sodium Polyglutamate, Lysine, Aspartic Acid, Lactic Acid/Glycolic Acid Copolymer, PEG-40 Stearate, Asparagine, Glycine, Polyvinyl Alcohol, Serine, Xanthan Gum, Diazolidinyl Urea, Valine, Iodopropynyl Butylcarbamate

CAUTIONS:

Precautions: These amino acids are naturally occurring in the body and are generally considered safe, gentle, and non-irritating for most skin types. Most individuals will tolerate this product well. However, those with sensitive, allergy prone, or compromised skin may experience mild irritation or allergic reactions, especially when combined with other active ingredients. As with any skincare product, a patch test is recommended prior to full application to ensure compatibility.

Warning: For external use only. Avoid direct contact with the eye. In the event of direct eye contact, rinse with cool water. Irritation, itching sensation and/or eye redness may occur. If irritation, inflammation or swelling occurs, discontinue product usage. If irritation persists or becomes severe, stop use and consult a physician. Keep out of reach of children.
