

# PAD PEPTIDE

## DESCRIPTION

Viktorija DeAnn Pad Peptide is a targeted treatment designed to support the appearance of fuller, more resilient skin. Peptides that support fat pad density and volume restoration play a key role in addressing visible signs of aging related to facial structure and skin thinning. These targeted peptides help restore fullness by encouraging the skin's ability to maintain subdermal volume, improving the look of hollow areas and diminished fat pads. They are especially beneficial for softening lines around the mouth, enhancing plumpness under the eyes and cheekbones. Bioactive messengers within the formula help revitalize adipocyte activity, promoting a more supple complexion that reflects improved skin integrity.

### TREATMENT STEP

 Restore

### PEPTIDE TYPE

 Signaling

### SKIN TYPE

All Skin Types, especially those with loss of fat pads and structural loss

### TEXTURE

Concentrated Serum

### LAYER LEVEL

Level 1 (0.6 kDa)

### KEY ACTIVES

Pro Pad Peptide Proprietary Blend, Acetyl Hexapeptide-38

### FUNCTION

- Supports communication and balance within adipose (fat) cells
- Helps maintain the look of natural skin volume and density
- Contributes to a smoother, more cushioned skin surface
- Assists in reinforcing the skin's underlying structural support system
- Promotes the appearance of firm, well-supported facial contours

### TARGETED SKIN CONCERNS:

- Loss of plumpness
- Diminished subdermal pads
- Skin thinning and sagging
- Loss of facial structure
- Shifting or loss of skin integrity
- Deep lines around eyes & mouth
- Thinning skin on hands, mouth cheekbones and under eyes

## THE SCIENCE:

**Adipocytes**, or fat cells, play a vital role in maintaining facial structure, volume, and overall skin resilience. These cells interact with peptides through signaling pathways that help maintain lipid metabolism, tissue support, and structural harmony. By modulating these pathways, peptides can help foster an optimal environment for adipocytes to support smoothness and contour.

With the increasing prevalence of **rapid weight loss**, whether from lifestyle changes or peptide-based interventions, the face is often one of the first areas to show visible signs of volume loss. This accelerated reduction of facial fat alters skin contour and firmness, creating a need for targeted structural support. Hormonal fluctuations during pre-, peri-, and menopause, particularly the decline in estrogen, further contribute to the loss of facial fat pads, leading to sagging and diminished elasticity. Peptides that communicate with adipocytes can help support the skin's natural ability to maintain balance, reinforcing the structural integrity of these fat cells and promoting a more lifted, youthful appearance even during periods of rapid change.

#### PROFESSIONAL USAGE:

After Cleanse Phase, apply ¼ dropper to dry face, neck and décollete, avoiding the eye area. Wait 1-2 minutes when using in combination with other Restore Peptides. Apply additional Restore Peptides to dry face, neck and décolleté. Follow with the Protect Phase.

#### HOME USAGE:

After cleansing, apply 5-10 drops to dry the face, neck, and décollete avoiding the eye area. Wait 1-2 minutes when using in combination with other Restore Peptides. Apply additional Restore Peptides to dry face, neck and décolleté. Follow with the Protect Phase.

#### KEY ACTIVES:

**Pro Pad Peptide** - designed to support balanced fat pad function, this peptide complex helps maintain the appearance of natural fullness and density in the skin. By promoting harmony between adipose cells and surrounding structural elements, it reinforces the skin's supportive framework and helps preserve a smooth, supple, and resilient complexion.

**Acetyl Hexapeptide-38** - a bioactive signaling peptide that supports communication pathways involved in adipocyte activity and lipid balance within the skin. By promoting harmony between adipose tissue and surrounding structural components, it helps maintain the look of natural volume and contour. This peptide is particularly valued in areas prone to visible volume depletion or hollowing, such as the under-eye, cheek, and perioral regions, where maintaining structural support is essential for a balanced facial appearance. It supports optimal conditions for skin density and resilience, contributing to a smoother, plumper-looking complexion.

#### INGREDIENTS:

Aqua (Water), Propanediol, Pantothenic Acid (B5), Glycerin, Arginine, Lysine, Histidine, Glycine, Aspartic Acid, Acetyl Hexapeptide-38, PEG-40 Stearate, Retinyl Palmitate, Xanthan Gum, Diazolidinyl Urea, Niacinamide (B3), Tyrosine, Iodopropynyl Butylcarbamate

#### CAUTIONS:

**Precautions:** These amino acids are naturally occurring in the body and are generally considered safe, gentle, and non-irritating for most skin types. Most individuals will tolerate this product well. However, those with sensitive, allergy prone, or compromised skin may experience mild irritation or allergic reactions, especially when combined with other active ingredients. As with any skincare product, a patch test is recommended prior to full application to ensure compatibility.

**Warning:** For external use only. Avoid direct contact with the eye. In the event of direct eye contact, rinse with cool water. Irritation, itching sensation and/or eye redness may occur. If irritation, inflammation or swelling occurs, discontinue product usage. If irritation persists or becomes severe, stop use and consult a physician. Keep out of reach of children.
