

# SKIN LAXITY & POOR STRUCTURE

Viktorija DeAnn's firming peptide formulations target skin laxity and structural decline by supporting collagen and elastin production to restore strength and elasticity. These advanced peptides help tighten, lift, and tone the skin while promoting cellular restructuring for improved firmness and definition. With consistent use, facial contours appear more sculpted and youthful, and the skin regains a resilient, lifted appearance with renewed structural integrity.

## COMMON SYMPTOMS

- Loose or sagging skin
- Visible structure loss in the jawline, neck, and eyelids
- Loss of firmness and elasticity
- Decreased collagen and elastin production
- Thinner, less resilient skin
- Drooping facial contours
- Less defined facial structure
- Deep fine lines and wrinkles
- Crepey and uneven texture
- Overall diminished tone and lift
- Significant visible skin aging
